(75) Inventors/Applicants (for US only): **VAN DER**

(54) Title: METHOD AND APPARATUS FOR COMPOSITE USER INTERFACE CREATION

(57) **Abstract:** A method for directing messages between a composite user interface and at least one source application. A message is to be directed to a predetermined set of services, each service executes a command specified by the message and the message comprises details of the predetermined set of services. Each service in the predetermined set of services uses said details to determine whether the message should be sent to another service, and if it is determined that the message should be sent to another service transmits the message to an appropriate service.
